

M3 v3.1

The next M3 release will be version 3.1 now scheduled for summer, 2003. The following capabilities will be included in v3.1:

- PKI capability as mandated by OSD
- s/mime gate to receive s/mime traffic
- Outbound message generation for DMS which allows DD173 messages to be passed to DMS front end
- Additional role "operator". Allows operator to perform various systems maintenance functions without root access.
- Syncing capability which allows accounts and messages on alternate or backup M3 systems to keep in step with primary server
- CP-XI XML schema and gate for inbound DMS traffic
- Decision Agent (DA) interface for inbound DMS traffic
- SA message alert will provide visual and/or audible warning to the user of an SA message
- Email comments with query results allows the user to attach comments when emailing the results of simple and advanced queries.
- COI for SA and ISSO
- Storing attachments from s/mime messages by the native format
- Copying attachments to local web or other file
- Migration to the Verity K2 search engine
- Initiate customer native email application so the existing address book can be used
